

## Your advantages

- Suitable for all Direct Injection petrol engines
- Perfect drivability & high performance
- 21% CO<sub>2</sub> reduction versus petrol\*
- 99,5% fine particle reduction versus benzine\*
- Quick conversion & maintenance free
- Insensitive for weather conditions or autogas compositions
- 5 year system warranty

\* research reports available on our website

## Advanced Autogas Technology for Direct Injection Petrol Engines

## Autogas system for Direct Injected petrol engines

- Vialle proudly presents the most advanced autogas-system worldwide available to you: its unique and highly innovative **DirectBlue** system. The **DirectBlue** system is specifically developed for direct injection petrol engines. Vialle is the first company which successfully developed a reliable technology that injects the autogas in liquid phase directly into the cylinders, similar to petrol. Therefore the engine performance and driveability are maintained.
- The heart of the **DirectBlue** system is the patented FSU4 ("Fuel Selector Unit") which switches smoothly between petrol and autogas. The FSU4 directs the selected fuel to the original petrol injectors of the engine. The driver can select the desired fuel at any time, either autogas or petrol by simply using the switch which is mounted to the dashboard. All **DirectBlue** components used are tested and certified under regulation EC 67-R01.

Range calculated with avg fuel prices dated Februari 2019

## Warranty **DirectBlue**

Vialle offers a standard system warranty of 5 years.

## Emission results

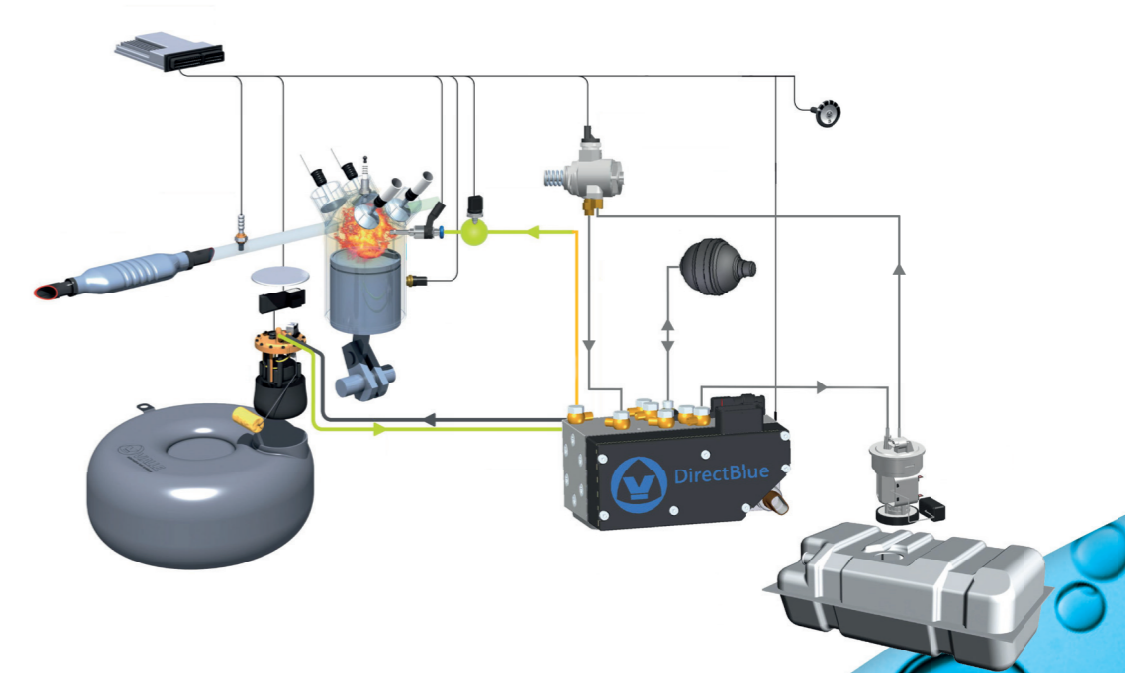

Source: tests performed by Tuv Hessen

Fuel cost of a full tank (50 ltr.)	Petrol	Autogas
Fuel cost of a full tank (50 ltr.)	€ 83,-	€ 33,-

Price based on average Dutch prices dated Februari 2019 with a tank capacity of 50 liters.
